

**AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) A method for diagnosing pancreatic cancer, comprising the detection of a methylated SPARC nucleic acid molecule ~~or a variant thereof~~ in a sample from a subject, wherein the methylated SPARC nucleic acid molecule has at least ~~about~~ 90% sequence identity to ~~a~~ the nucleic acid set forth in SEQ ID NO: 1 (Figure 6), and wherein the sample is a pancreatic cell culture, a pancreatic tissue biopsy or a pancreatic juice sample.
2. (Original) The method of claim 1 wherein the presence of a methylated SPARC nucleic acid molecule is compared to a sample from a subject without cancer.
3. (Cancelled)
4. (Original) The method of claim 1 wherein the sample is obtained from a mammal suspected of having a pancreatic cancer.
5. (Cancelled)
6. (Cancelled)
7. (Cancelled)
8. (Currently Amended) The method of claim 1, wherein the methylated SPARC nucleic acid molecule ~~comprises~~ has at least ~~about~~ 95% sequence identity to a the nucleic acid set forth in SEQ ID NO: 1 (Figure 6).
9. (Currently Amended) The method of claim 1, wherein the nucleic acid molecule is expressed ~~at least at~~ a lower level in a patient with pancreatic cancer as compared to expression levels in a normal individual.

10. (Currently Amended) The method of claim 1, wherein the nucleic acid molecule is expressed at least ~~about~~ 5 fold lower in a patient with pancreatic cancer as compared to expression in a normal individual.
11. (Currently Amended) The method of claim 1, wherein the nucleic acid molecule is expressed at least ~~about~~ 10 fold lower in a patient with pancreatic cancer as compared to expression in a normal individual.
12. (Cancelled)
13. (Previously Presented) The method of claim 1 wherein the subject sample is obtained from a mammalian patient.
14. (Previously Presented) The method of claim 1 wherein the subject sample is obtained from a human patient.
15. (Cancelled)
16. (Cancelled)
17. (Previously Presented) A method of claim 1 wherein the method of detecting a methylated SPARC nucleic acid comprising methylation specific polymerase chain reaction (MSP).
18. (Currently Amended) A method for detecting a methylated CpG-containing SPARC nucleic acid molecule, wherein the methylated SPARC nucleic acid molecule comprises the nucleic acid sequence set forth in SEQ ID NO: 1, the method comprising: contacting a nucleic acid-containing specimen with bisulfite to modify unmethylated cytosine to uracil; contacting the SPARC nucleic acid molecule with oligonucleotide primers that discriminate between methylated and unmethylated CpGs; and detecting the methylated CpGs in the nucleic acid, and wherein the specimen is from a pancreatic cell or tissue.

19. (Original) The method of claim 18, further comprising amplifying the CpG-containing nucleic acid in the specimen by means of the oligonucleotide primers.
20. (Original) The method of claim 19, wherein the amplifying step is the polymerase chain reaction (PCR).
21. (Original) The method of claim 18, wherein the CpG-containing nucleic acid is in a promoter region.
22. (Original) The method of claim 21, wherein the promoter is a tumor suppressor gene promoter.
23. (Cancelled)
24. (Currently Amended) A method for diagnosing pancreatic cancer, comprising the detection of a methylated SPARC nucleic acid molecule ~~or a variant thereof~~ in a sample from a subject, wherein the nucleic acid molecule is expressed at least ~~about~~ 5 fold lower in a patient with pancreatic cancer as compared to expression in a normal individual, and wherein the methylated SPARC nucleic acid molecule has at least ~~about~~ 90% sequence identity to the nucleic acid set forth in SEQ ID NO: 1 (Figure 6), and wherein the sample is a pancreatic cell culture, a pancreatic tissue biopsy or a pancreatic juice sample.
